THE TELEMACHON.

An Electric Machine that will Transmit Power by Wire.

The New York Sun says that Edimachine, to which the name telemachon is given by its inventor. Wm Wallace, of Ansonia, Ct., for transmitelectricity

Mr. Edison believes he can assist Mr Wallace in perfecting the telemathan that power may be transmitted rom one point to another as though the nower of the Naugatuck river a ceipt, bill of lading, or any other quarter of a mile. The power of this property which he shall have receivderous machinery of the Wallace factory, where 3000 men are employed. electricity only 20 per cent is loss.

' In this instrument the electricity is produced by the Wallace dynamelectric machine, no battery being used Four large electro magnets are placed with their potes facing each other. On an axis parallel with and a row of electro magnets, thirty in for made the other. number, on each face whose poles, fahese gentlemen from the country, exiled the field of force. On the same who is stopping at the Atisuzic Hotel, axis, but outside of these disks, strips of copper are placed equal in number on requesting to be shown to his room, to the magnets on the disks, each was ushered into the elevator, by the strip of copper being connected to one darkey who prainpulates that machine | end of the wire on the magnet. The other end of the wire goes to the next strip. Each strip, therefore is connected to the last end of the coils and to the first end of that immediately pragnets, la revolved by any power, the weak magnetism remaining in the laws itself generates a current of church affairs, for that is not unfreelectricity in the wire surrounding quently inspired by hypecritical and these magnets. In virtue of the prinple discovered by Paraday, that whenever a conducting wire is moved in the vicinity of a magnet a current of display, for the long eared beast is electricity is caused to circulate in that the humblest of animals, but when wire, the feeble current thus genera- aroused is terrible to behold, ted flows around the magnets of the roundly, much to the delight of sets upon the revolving magnets, increases the electric cur ent, and so, alernably, until the magnetism obta as a maximum and that maximum is generated in the wires of the re-

volving magnes This current bears for each a perfectly definite ratio to the power consumed, and they are capable of converting eighty per cent. of the power applied into electricity The electric current generated is car ried by two copper wires to a second muchine, the telemation This effects Conservative party was held, at the the reverse operation-that is to say, wire in two series of fifty coils. The Judge George W. Easley, Chair - enas of these wifes the art nately to the right and left of the arends of these wires come out aftermen of the Executive Committee, mater, and are connected with two explained the object of the meeting, break pieces upon their axis.
